Epidemiological model structure (proposed)
Measured in this study
Protective behavior by trust stratum
Vaccination status (self-reported) by trust stratum
Institutional trust strata
indexed by τ (τ = 1 ... K)
Contact reduction C(t, τ)
modulates transmission rate β(t, τ)
Vaccination rate v(t, τ)
High
Moderate
Low
Time-varying transitions between strata
θ(t)
Assortative mixing between strata
K strata, set by the response categories of the instrument
measured in this study
assumed or proposed by the framework
